

Digital Pen & Paper

AMPScribe Digital Pen is an intelligent and robust data capture tool that allows you to store vital information electronically, improving data integrity. All text and images written with the pen on the paper, is converted into digital data. You benefit from the efficiency and power of digital technology while maintaining all the familiarity and ease of using an ordinary pen and paper.

The pen

The digital pen looks and feels like a normal ballpoint pen, yet, contains an integrated digital camera, an advanced image microprocessor, and a mobile communications device for wireless connection. The pen is activated by simply removing the cap and de-activated by replacing it.

The battery and memory life of the Digital Pen is sufficient to capture and store 40 full pages of handwritten data. The pen also contains an ink cartridge so that you can actually see what you have written.

The paper

To make the paper digitally readable a patent-protected dot pattern is embedded on the paper. Almost invisible to the naked eye the pattern consists of numerous intelligent small dots that can be read by the pen.

Custom forms can be easily created to suit your needs. Each form can be used numerous times, reducing your resources and waste. More so, the pattern on each paper has a unique identity so that each page can be kept separate from another.

The transfer

Once the form is completed, transferring the data stored in the pen is easy to do using a USB port, the Digital Pen can be docked and the data downloaded and transferred to any PC / Server.

The form can be reviewed in a web application which also provides the feature to edit as necessary, whilst maintaining a full audit trail of all changes. Once the form is saved the data is automatically submitted to AMPS™.

Overview

Absolute Accuracy

Takes your handwritten notes and turns them into text or illustrations.

User-friendly

Can be used by anyone, anywhere at anytime! With a simple push of a button you can sync your data into AMPSTM.

Simple

It's small, easy-to-use, completely wireless and there's no need to change basic operational processes or working routines.

Certainty

Track the location, user, and time of completed forms. You are notified if any required fields are not completed, if the transmission has failed and you will receive confirm when your data has been sent.

About Siemens

Our world is rapidly changing due to four global megatrends – climate change, urbanisation, globalisation and demographic change. The pressures brought on by these four global megatrends can affect businesses and individuals significantly. Siemens has a portfolio of technology-based solutions to help tackle such challenges.
