

Deployable logistics solutions

AMPS™ leads the Defence and Maritime industries in deployable asset management and logistics software within Naval forces and operators of similar vessels such as coast guards, marine services and police fleets. We deliver comprehensive asset management and logistics support for deployed units via a inherent web-based application, allowing for flexible access to AMPS™ many functions.

AMPS™ improves the effectiveness of all ILS activities by enhancing productivity at all levels. The benefit of a fully integrated logistics system is the ability to quickly access information from one secure source. Our integral database reporting module facilitates automated data exchange between shore organisations and their deployed maritime assets, ensuring that ILS planners at all levels and locations have access to current information.

Our solution can be scaled to best-fit the requirements of any business and its assets, allowing for a tailorable approach to project implementation. As a business' requirements evolve additional functions can be activated and interfaces to legacy systems created to ensure that the full spectrum of an asset's full life cycle details are available for cost analysis.

AMPS™ is used by a range of clients including; the Royal Australian Navy (RAN), the Royal New Zealand Navy (RNZN), the Royal Malaysian Navy (RMN), the Royal Navy of Oman (RNO), and the Australian Customs Marine Unit.

Siemens works closely with all clients to identify and understand how AMPS™ will integrate into their business process. Understanding your needs allows Siemens to tailor AMPS™ to exceed your expectations. About Siemens

Our world is rapidly changing due to four global megatrends – climate change, urbanisation, globalisation and demographic change. The pressures brought on by these four global megatrends can affect businesses and individuals significantly. Siemens has a portfolio of technology-based solutions to help tackle such challenges.
